Workwear Icons

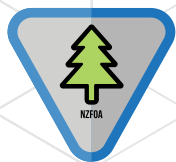

Day Only

Garments for high risk applications, **Day only use**. The design of these garments includes the minimum area of fluorescent or non-fluorescent background (compliant) materials present, including fabric, design and colours. We can provide a certificate of Conformance issued by an Independently Audited Laboratory for any product which has this Icon*.

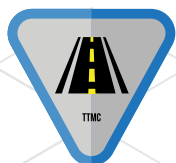

Day/Night

Garments for high risk applications, **Day/Night use**. The design of these garments includes the minimum area of fluorescent or non-fluorescent background (compliant) materials present, including fabric, reflective tape, design and colours. Garments with this icon ensure visibility of the user in high risk applications under any light conditions by day and under illumination by vehicle headlights in the dark (24 hours visibility). We can provide a certificate of Conformance issued by an Independently Audited Laboratory for any product which has this Icon*.

NZFOA

This is an Industry standard for the NZ Commercial Forestry Industry, provided by the New Zealand Forestry Owners Association. Its requirements are lower in some areas than the AS/NZS4602.1 and it does state that any garments which comply with AS/NZS4602.1 are accepted for use. By this designation all our garments which meet AS/NZS4602.1 are suitable, and we classify them as compliant to the NZFOA standards. Day Only use is Classified by NZFOA as FID compliant and Day/ Night Use is classified as FIDN.

TTMC

TTMC recognises that working within the roading corridor and/or its close proximities or related development sites arguably represent the highest risk factors of any worksite in New Zealand, where risk of serious injury is both frequent, and the outcome serious. For this reason, TTMC garments provide increased conspicuity in all weather conditions and at different times of the day and night.

High visibility materials used in TTMC comply with:

AS/NZS 1906.4 Fabric & Tape

AS/NZS 4602.1 and/or AS 4602.1 Design

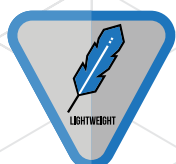

It is the responsibility of the employer or wearer to select the garment that is appropriate for the task, activity and circumstances at hand.

UPF Rating

Products which have this Icon have had the fabric tested to AS4399:1996 for its UPF rating. This rating based on the percentage of UV Radiation that can penetrate the fabric. It is known that over 90% of skin cancers are caused by the cumulative effects of sun exposure. UPF rated clothing is an excellent option for sun protection as it does not degrade over the day like other sun protection products. The rating is expressed as a number as per the table right:

UPF Rating	Protection Category	Effective UV Transmissions (%)
15, 20	Good	6.7 - 4.2
25, 30, 35	Very Good	4.1 - 2.6
40, 45, 50, 50+	Excellent	Less than 2.5

Lightweight

Garments are manufactured from a lighter weight fabric than most equivalent garments. They are great options for when heat fatigue is a factor in garment selection.

DISTRIBUTED BY

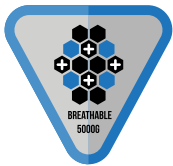

Workwear Icons

Water Proof

Garments have been tested for their waterproof properties in a Certified Laboratory using the Hydrostatic Head Pressure Test Method - AS 2001.2.17.

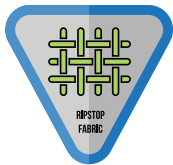

Hydrostatic Head (HH) is a way of measuring how waterproof a fabric is. The resulting measurement in millimetres relates to how high a column of water standing on the fabric would need to be before the water would penetrate the fabric. Traditionally the test is carried out using a physical column of water though as fabrics have developed, the ratings were getting too high for this method. Therefore the test is done using a machine that replicates the downward pressure that a water column of such height would create. The machine increases the pressure of water that is pushed against the fabric until water is visible on the other side. The required level of pressure used to force water through the fabric is then converted into a measurement of how high the water column would have been. This provides the result of the Hydrostatic Head test (in millimetres).

Breathable

Garments have been tested for their breathability in a Certified Laboratory using the Water Vapour transmission Test - ASTM E-96.

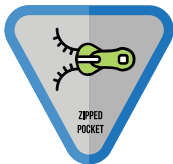

This test provides a rating for breathability, where the higher the rating the higher the breathability of the garment. This gives the wearer a measure to compare garments. Traditional rainwear had no or very low, breathability while the more technical fabrics now available can provide higher breathability, while still retaining a high waterproof performance.

Ripstop Fabric

Garments mainly constructed from Ripstop Fabric.

Ripstop is the technique of weaving larger threads into a fabric in an intersecting pattern. The purpose of this is to create a fabric which, while lighter weight than regular fabric. It is either as strong or stronger due to the series of thicker threads. It also has a much higher resistance to tearing for its overall weight. Ripstop fabrics, when used in workwear result in garments which are lighter, stronger and more durable than equivalent weight garments made from regular fabrics.

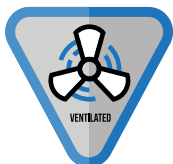

Zipped Pocket

These garments incorporate a Zipped Chest Pocket which can take several shapes and positions (Including under the Stormflap on Waterproof garments). All are designed with the contemporary smartphone in mind. Generous space, coupled with a secure zip to ensure your phone and all its valuable content, will not fall out and be destroyed during the course of your work.

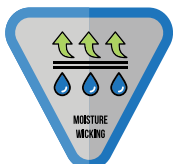

King Sizes

Any garments which have this icon are available in our additional King Sizes. These are sizes specifically designed to cater for individuals who require a fully compliant garment with a great fit. For Polos, Polar Fleece & Shirts this is Sizes 9XL, 11XL & 13XL (Up to a 210cm Chest Measurement). In coveralls & overalls, this is Sizes 16 & 18 and in our Women's Fit range Sizes 24, 26 & 28.

Ventilated

Garments incorporate mesh panel or vents in the design to create additional air flow & cooling. These features are especially important in fibres that do not breath to the same level of natural fibres such as cotton.

Moisture Wicking

Garments that use fabrics which have moisture wicking properties. This enables the transmission of perspiration away from the body more quickly than non-moisture wicking fabrics, creating a cooler feel.

StormPro X garments are a premium Rainwear option designed with the perfect mix of both functionality and durability. With minimum joins and seams, durability and longevity of the garment is increased, even the toughest working environment.

The key to the StormPro X range is our Premium Triple layer fabric, 450D Polyester Oxford with PTFE & PU Membrane with a class leading:

- H2O:35000mm Water Column rating
- 6000gm/m²/24H breathability
- Segmented heat applied reflective tape

PCR5030

StormPro® X TTMC Jacket

FEATURES:

- Premium Triple layer fabric, 450D Polyester Oxford with PTFE & PU Membrane
- Segmented Heat applied reflective tape, reduces unnecessary stitching and seam sealing, eliminating a potential cause of leaks and premature garment failure
- Storm Flap over the zip with Velcro closure
- Zip Smartphone Pocket inside Storm Flap
- 2 Storage Pockets
- Detachable ID Pocket
- Velcro adjustable cuffs
- Adjustable Hood designed to fit over Hard Hats
- Water Column: H2O:35000mm
- Breathability: 6000g/m²/24H.
- AS/NZS 1906.4 Fabric & Tape
- AS/NZS 4602.1 Design
- TTMC compliant
- NZFOA compliant

StormPro[®] Spray Coverall

The correct care and maintenance of protective clothing for agricultural chemical users is an important health and safety measure and is applicable for all clothing that is subjected to chemical contamination.

For use with water based pesticides spray drift splashes only. Not recommended for contact with dyes, solvent based chemicals, alkaline or acid based chemicals. DO NOT use for high pressure spray, large spills, overflow, highly toxic or hazardous chemicals. Always read manufacturers labels prior to use, to ensure adequate protection. Made from 100% Polyester Outer with 100% PU Inner. DO NOT use when exposed to flame, undue heat or potentially explosive environments.

CAUTION WORKWEAR OILSKIN RANGE

OILSKIN FABRIC

The origins of Oilskin fabric can be traced back to the Sea. Sailors learnt that treating old cotton sails with linseed oil would produce a hard wearing weatherproof finish, long before the advent of synthetic waterproof fabric. Caution® Oilskin fabric is now made from new 100% Cotton fabric, tightly woven, and treated with a special formulation of Oils & Waxes to provide a superior Water Resistance and Durability. They are sewn with a specially formulated thread which is non-wicking and also accepts the oil treatment to ensure a water resistant seam. Additionally, our range of Caution® Hi-vis Oiskins have a Hi-vis outer layer sewn overtop of the regular Oilskin fabric. This is to ensure that the uncompromising performance and durability of the garment remains the same with an added benefit of AS/NZS4602.1 certified Performance & Visibility.

OUR UNIQUE FEATURES

Internal Zipped Cellphone pocket inside the Storm Flap

Generous sized cellphone pocket, conveniently located inside the storm flap for ease of access & zipped to ensure safe storage of your phone.

Domed Storm Flap over the Main Zip

Storm flap ensures water cannot enter the main zipper and also allows the Hi Vis Oilskins to fully comply with the requirements of AS/NZS4602.1

Oilskin lined Anti-Sag tail

Instead of the fleece lining extending to the Bottom of the Tail, our Oilskin Vests & Jackets have Oilskin fabric for the inside lining of the Tail. This ensures the lining will not hang out the bottom of the garment. It also avoids the fleece lining getting wet when riding ATVs & Motorbikes.

OILSKIN CARE INSTRUCTIONS

When new, a small amount of Oil from the Oilskin Waterproofing Process may remain on the surface of the Garment. This is normal and will disperse with natural use. To assist this process, you may rinse the garment manually in cold water and hang it to dry in a warm, well-ventilated place.

To Clean, either hang the garment and hose it down or rinse manually in Cold water. Any excess dirt can be removed carefully with a brush or damp cloth. Hang in a well-ventilated place to dry and to store. To ensure long-lasting performance periodically apply an Oilskin reproofing wax to the oilskin fabric & seams.

Safety Steps

FEATURES:

Our Safety Steps are a user-friendly alternative to standard step ladders. Lightweight and durable, with indented steps on all four sides and a reinforced underside to prevent sagging. They are cost-effective and very easy to use, plus they are easy to store in a smaller space than a conventional ladder. Perfect for the home, the office, retail stores, factories, warehouses and just about anywhere else.

- 250kg Safe Working Load
- Indented steps on all four sides for 4 way access
- Anti-slip Grip tape for greater stability
- Non-slip rubber feet
- Reinforced underside for extra strength
- Dimensions: 510x510mm Wide x 370mm High
- Weight: 3.5 kg

PSK9200

Universal Workshop Spill Kit 25L

Universal Spill Containment Kits are designed to clean up spills of general-purpose liquids commonly found in the Workplace, chemicals, hydrocarbons, acids and alkalis.

Usage: Jobsites, Workshops, Business Premises with Low Spill Containment requirements

Performance: Absorbs up to 25L per kit

Kit Contains:

- 1x 25Ltr Bucket
- 14x Sorbent Pads
- 2x 1.2m Sorbent Socks
- 1x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Waterproof instruction card

PSK9201

Oil Only Workshop Spill Kit 25L

Oil Only Spill Containment Kits are designed to clean up spills Containing Hydrocarbons (Oil, Fuels etc), especially in Wet environments as the components repel water while absorbing Hydrocarbons. They are ideal for Marine environments.

Usage: Jobsites, Workshops, Business Premises with Low Spill Containment requirements

Performance: Absorbs up to 25L per kit

Kit Contains:

- 1x 25Ltr Bucket
- 10x Sorbent Pads
- 2x 1.2m Sorbent Socks
- 1x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Waterproof instruction card

DISTRIBUTED BY

PSK9203**Universal Vehicle Spill Kit 25L**

Universal Spill Containment Kits are designed to clean up spills of general-purpose liquids commonly found in the Workplace, chemicals, hydrocarbons, acids and alkalis.

Usage: Utes, Vans, Light Commercial Vehicles with Low Spill Containment requirements

Performance: Absorbs up to 25L per kit

Kit Contains:

- 1x Carry Bag
- 14x Sorbent Pads
- 2x 1.2m Sorbent Socks
- 1x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Waterproof instruction card

**PSK9204****Oil Only Vehicle Spill Kit 25L**

Oil Only Spill Containment Kits are designed to clean up spills Containing Hydrocarbons (Oil, Fuels etc), especially in Wet environments as the components repel water while absorbing Hydrocarbons. They are ideal for Marine environments.

Usage: Utes, Vans, Light Commercial Vehicles with Low Spill Containment requirements

Performance: Absorbs up to 25L per kit

Kit Contains:

- 1x Carry Bag
- 10x Sorbent Pads
- 2x 1.2m Sorbent Socks
- 1x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Waterproof instruction card

PSK9206

Universal Truck Spill Kit 50L

Universal Spill Containment Kits are designed to clean up spills of general-purpose liquids commonly found in the Workplace, chemicals, hydrocarbons, acids and alkalis.

Usage: Light-Heavy Commercial Vehicles with Moderate Spill Containment requirements

Performance: Absorbs up to 50L per kit

Kit Contains:

- 1x Carry Bag
- 30x Sorbent Pads
- 4x 1.2m Sorbent Socks
- 2x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Pair Safety Goggles
- 1x Waterproof instruction card

PSK9207

Oil Only Truck Spill Kit 50L

Oil Only Spill Containment Kits are designed to clean up spills Containing Hydrocarbons (Oil, Fuels etc), especially in Wet environments as the components repel water while absorbing Hydrocarbons. They are ideal for Marine environments.

Usage: Light-Heavy Commercial Vehicles with Moderate Spill Containment requirements

Performance: Absorbs up to 50L per kit

Kit Contains:

- 1x Carry Bag
- 20x Sorbent Pads
- 4x 1.2m Sorbent Socks
- 2x 2.5kg Mineral Sponge
- 2x Hazardous waste bags
- 1x Pair Chemical gloves
- 1x Pair Safety Goggles
- 1x Waterproof instruction card

LOCKOUT PADLOCK - KEY MANAGEMENT SYSTEM

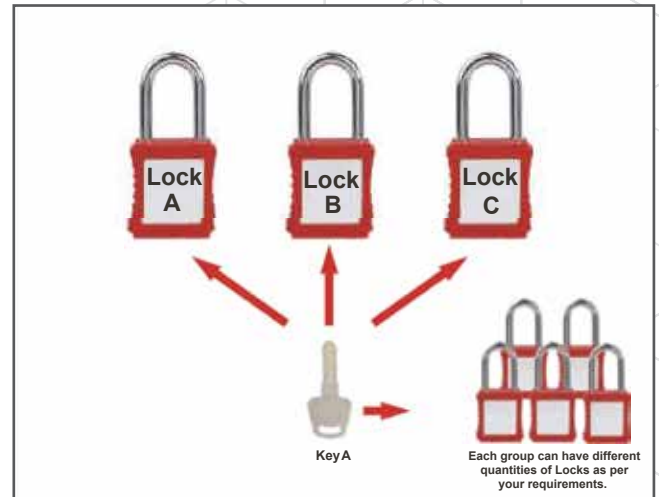

The Lockout Padlocks come with both Keyed Different and Keyed Alike options, along with a Master key system. This allows a high level of customisation for complex lockout systems with Multi level access and a wide range of different Groups. See below for Diagrams of each Key option.

Keyed Different

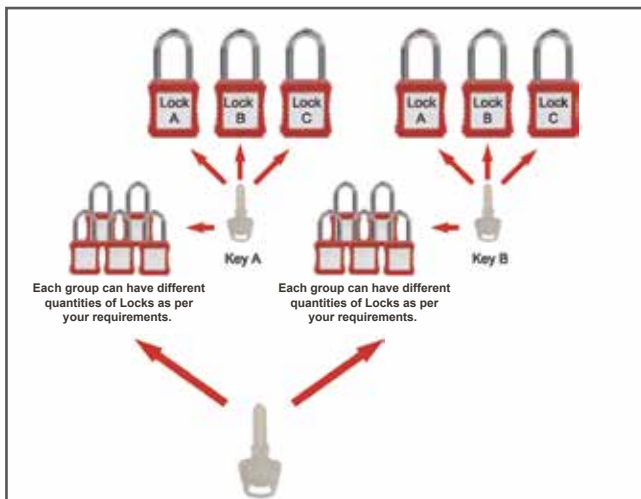

Each Lock has only One Key. The Key does not open any other Locks. Ideal for Maximum Safety in High Risk applications. Only the Lock owner can remove the Lock with no risk of accidental removals.

Keyed Alike

Each Lock within a designated group takes the same Key. The Key will open all Locks within the Group. Multiple Groups can be set up with different keys. Ideal for situations where individuals need multiple padlocks. Requires careful Management to ensure no crossover of Keyed alike Padlocks between staff.

Keyed Alike with Master Key

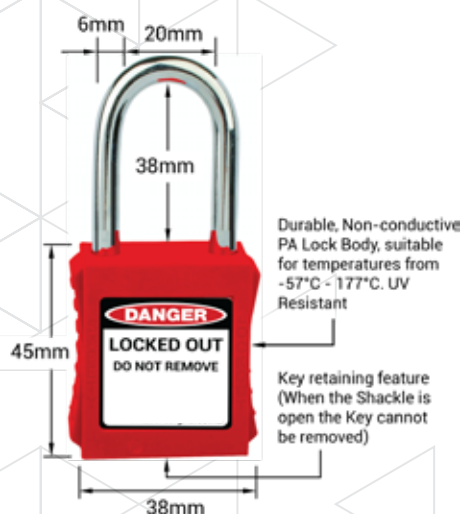

Exactly the same principle as the standard Keyed Alike Locks, except there is a Master Key which will open all Groups. Also ideal for Plant Shutdown situations. A designated Supervisor has the ability to remove any locks left after the job is finished. Must be managed very carefully to minimise the risk associated with this type of system.

Lockout Padlock - Unique ID Systems

The Lockout Padlocks can be specified with Custom Printed Labels. These labels can support a number of Variable Printed fields, including a Photo ID, Name, Mobile Number and any other relevant information to allow easy Identification. This can significantly reduce the time taken to resolve the issue of Padlocks left in place after the job is completed. Especially helpful in Planned shutdown situations where it is important to re-energise and re-start plant as quickly as possible.
